

Born on the Jobsite™ for the Industrial Athlete™

Ironclad was founded on a construction site in 1998 by Ed Jaeger. Ed noticed that while every specialist utilized dedicated, task specific tools, no one had addressed the special connection between tool and worker. With an extensive background in motor sports, Ed came from a world where glove performance, fit, and comfort were vital. It was at that moment that Ed saw his mission - to create gloves that were both protective and driven by performance, without sacrificing either. Thus was born a new glove technology that incorporated military grade fabrics, with an unrivaled fit and comfort, that would raise the industry to new standards.

With 27 patents worldwide and more pending, Ironclad Performance Wear continues to grow and innovate; bringing new technologies to the everyday heroes, the unheralded men and women whom we depend on every single day. It's a mission we are proud of, and strive to deliver everyday.

Gloves Without Limits

Pushing glove technology to the edge is what we do. It's what allows us to innovate and create the most badass gloves possible that meet the needs of some of the most badass people around. We aren't afraid to experiment and see what works, and what doesn't, to grow the field and create gloves without limits. Whether it's leather that is 10x stronger than normal, or gloves that are heat resistant to +600°F while still being able to pick up a nail. We pride ourselves in our ability to think outside the box.

That's where our Ironclad Limitless Technology (ILT) comes into play. These advanced features are in the DNA of our most cutting edge gloves.

Limitless Leather

Our Limitless Leather Technology utilizes proprietary tanning and sourcing methods, resulting in a leather that is 10x the durability of traditional glove leather.

Case Hardened Fibers

By utilizing technology that embeds cut-resistant-particles into our fibers, we are able to achieve higher level cut resistance at lower gauges, resulting in a better fitting, more comfortable glove.

HotShield® Technology

Incorporating special, proprietary manufacturing processes and advanced materials, we have created advanced fabrics that resists high heat, while still maintaining dexterity and durability.

Vibram® Grip Technology

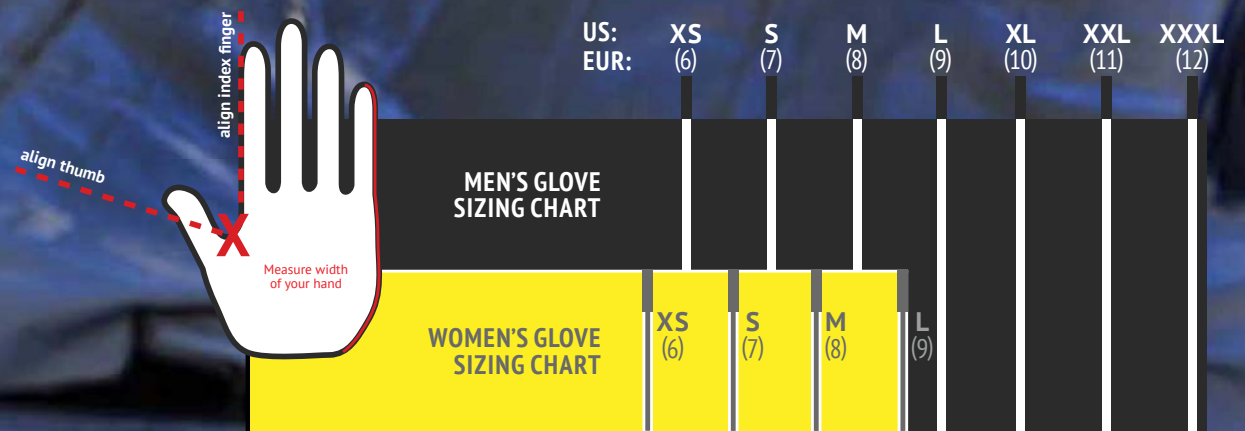

Through a partnership with Vibram® Inc.'s USA technology team, we literally created work boots for your hands. With over 10x abrasion resistance and 200% more grip in oily conditions, these gloves push the bounds of what is possible in hand protection. For more information on our Vibram® glove collection, please visit our website at www.ironclad.com

Ironclad Size Guide

Different situations have different fit requirements. We design our gloves with an industry leading flawless fit system that defines up to 16 application driven measurements. Our factories are held to the highest standards of quality control to ensure that every glove off the line provides a consistent, best in class fit. The chart below will help you determine the correct size glove for your hands.

Most of our products are machine washable. Please note that the washing and care instructions are indicated on the original product packaging and they may vary by style. For extended durability and comfort, machine wash and hang dry your Ironclad gloves on a regular basis. Machine wash on cool. DO NOT use bleach, machine dry, or use an iron on your Ironclad gloves. Air drying is recommended in order to keep the size consistent with its original form from time of purchase.

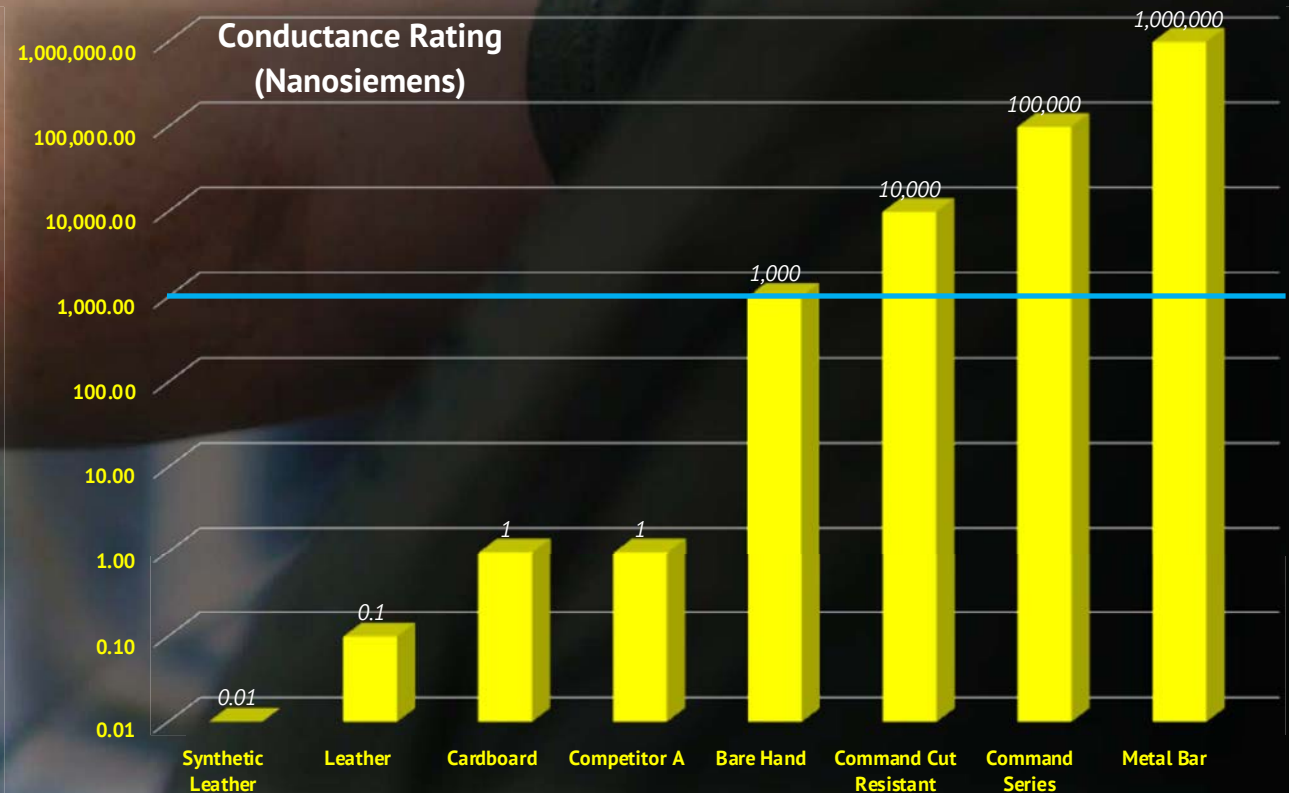

Command™ Infused Touchscreen Palm
Our proprietary Command™ technology fuses conductive nanoparticles to the fibers of our gloves creating a durable touchscreen compatible surface for the life of the glove.

TAKE
COMMAND™

TOUCHSCREEN REDEFINED FOREVER.

By fusing conductive nanoparticles into the fibers of the synthetic leather, we are able to ensure that not only is conductivity present throughout the entirety of the material, but also that the material stays conductive throughout its lifespan. Our touchscreen won't wear out or wash off like typical touchscreen work gloves.

We put our conductivity to the test as shown in the chart below. The blue line is the threshold for what we considered to be conductive (material that is at least as conductive as a bare hand). It is immediately noticeable that the Command™ gloves not only perform exponentially better than the competition, but they are also significantly more conductive than the human hand itself.

GLOVE TESTING & STANDARDS

There are 3 main testing standards that apply to our work gloves - CE:EN 388, ANSI 105, & ANSI 138. For each of our gloves that have been tested, the test results will be shown using the standard symbols for each governing body.

CE EN:388

Originally developed in Europe, CE:EN 388 has expanded to become the global work glove standard. This standard covers multiple aspects of glove safety, including Abrasion, Cut, Tear, Puncture, and Impact. This standard covers 2 cut tests - the Coup (rotating blade) test and a TDM (straight blade) test. One point to note is that during the Coup test, if the blade is dulled, the glove will receive a rating of "X" for this portion of the standard.

The symbol and how to read it are shown to the right.

| TEST | POSSIBLE OUTCOMES |
|----------|-------------------|
| Abrasion | 1-4 |
| Coup Cut | 1-5, X |
| Tear | 1-4 |
| Puncture | 1-4 |
| TDM Cut | A-F |
| Impact | Pass/Fail |

EN 388:2016

4X43CP Category 2

ANSI 105

Similar to CE:EN 388, ANSI 105 is a common work glove standard that covers many facets of gloves. ANSI testing is predominately used in North America, but its global presence is growing. The 2 areas that Ironclad primarily tests for are Cut and Abrasion, although the standard also covers puncture, heat, and chemical hazards. The cut test utilizes a TDM (straight) test and returns a score based on the grams of weight that were required for the blade to cut the fabric with 20mm of blade travel.

The symbol and how to read it are shown to the right.

| CUT LEVEL | MINIMUM TDM FORCE |
|-----------|-------------------|
| A1 | 200 grams |
| A2 | 500 grams |
| A3 | 1000 grams |
| A4 | 1500 grams |
| A5 | 2200 grams |
| A6 | 3000 grams |
| A7 | 4000 grams |
| A8 | 5000 grams |
| A9 | 6000 grams |

ANSI 105

CUT A6 ABR 3

3346g

ANSI 138

Introduced in 2018, ANSI 138 covers a standard specifically for impact gloves. The test is performed by dropping a weight at 18 different impact points across the fingers and knuckles, and measuring the forces at each point. The mean of the force is then calculated for each zone (fingers or knuckles) and the lowest is used to determine the impact rating for the whole glove.

The symbol and how to read it are shown to the right.

| TEST | POSSIBLE OUTCOMES |
|--------|-------------------|
| Impact | 1-3 |

ANSI / ISEA 138

2

CHOOSING THE RIGHT GLOVE

CUT RATING:

EXAMPLE USES:

A1 Low Cut Hazards: Packaging, Warehousing, Lawn Care / Gardening, General Purpose

A2 Low/Medium Cut Hazards: Packaging, Warehousing, Packaging, Automotive

A3 Medium Cut Hazards: Material Handling, Construction, Paper Production

A4 Medium/High Cut Hazards: Manufacturing, Construction, HVAC work, Metal Fabrication

A5 + High Cut Hazards: Metal Stamping, Scrap Metal Handling, Manufacturing, Recycling, Glass

A common misconception is that a higher cut rating is a safer glove. Yes, higher ratings will give you higher protection against cut hazards, but there is a trade off in the level of comfort, fit, and dexterity. Ultimately, a cut level rating offers no protection at all, if a worker is taking a glove on and off due to discomfort.

The chart to the left shows what some common applications are for each ANSI cut level. It also establishes a visual color scale associated to each level. This same color scale has been incorporated into our Command™ Cut Resistant gloves for easy cut level identification. This helps ensure the correct level of protection is being used by each worker.

In addition to the cut level of the glove, it is important to make sure that you choose gloves that will help you minimize the exposure to all hazards. When looking for the right glove, you should consider what hazards you will be encountering, and what features your glove needs to keep you protected. Some common features are listed below:

- ▶ **Impact:** The back of your hand is just as important as the palm. If you are in high impact situations, it is important to have your hands protected from all angles.
- ▶ **Heat Resistance:** Choosing a cut glove made of Aramid fibers, like DuPont Kevlar®, provides you with cut resistance while also helping keep you protected from high heat situations.
- ▶ **Grip:** Choosing the right type of grip for the job can help you hold what you are carrying, and also reduce hand fatigue. The table below shows the characteristics of the different types of grip coating that we offer.

COATING PERFORMANCE

| COATING | DRY GRIP | GREASE GRIP | WET GRIP | DURABILITY |
|-----------------|----------|-------------|----------|------------|
| Polyurethane PU | Medium | High | High | Medium |
| Nitrile Foam | Medium | High | High | Medium |
| Nitrile Sandy | Medium | Medium | Medium | Medium |
| Nitrile Flat | High | Low | Low | High |
| Latex | High | Low | Low | High |

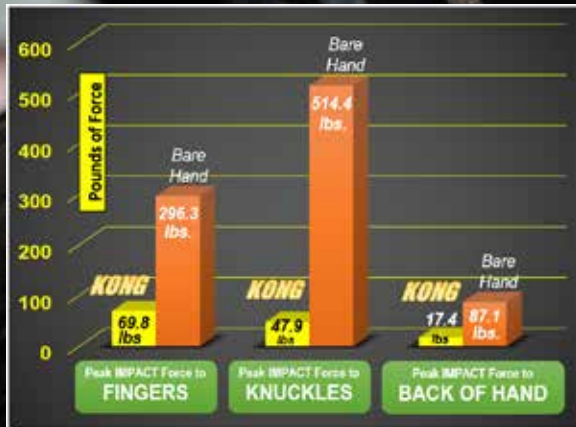

FIBER PERFORMANCE

| FIBER | CUT RESISTANCE | COMFORT |
|-----------|----------------|---------|
| Polyester | Low | High |
| Nylon | Low | High |
| Aramid | Medium | Medium |
| HPPE | Medium | Medium |
| Glass | High | Low |
| Steel | High | Low |

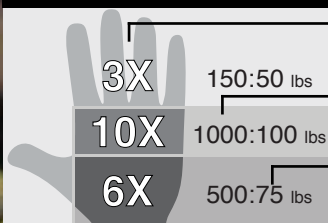

KONG®

Designed in conjunction with the Oil & Gas Safety Committee, our patented KONG® impact protection is designed to help protect against various impact situations. Through extensive testing with the University of Wisconsin, we have determined the optimal combination of materials to greatly reduce the effect of impacts; thus ensuring that your hands are safe. Our patented impact protection reduces impacts by up to 95%*, turning breaks into bruises. Look for our proprietary Impact Protection Symbol on each of our gloves to determine the best protection for your needs.

IRONCLAD IMPACT PROTECTION SYMBOL

PEAK IMPACT PROTECTION

Multiplication Factor - The additional impact protection provided by the glove

Peak Impact Force - required to cause a fracture when wearing gloves

Peak Impact Force - required to cause a fracture when *not* wearing gloves

85%

Ergonomic Metacarpal

Our patented metacarpal TPR design **reduces impacts by up to 85%***, while allowing for full range of motion & dexterity.

90%

Triple Padded Knuckle

By combining TPR protection and gel foam padding, KONG® impact protection **reduces knuckle impacts by up to 90%***.

66%

Patented Fingertip Protection

Our patented angled fingertip design extends all the way to the tip of the finger and **reduces impact by up to 66%***.

**Actual Impact Ratings Vary by Style*

High Visibility isn't simply a matter of using fluorescent colors, but also the environment in which it is being used. Built using a patented high visibility impact design, IVE™ maximizes hand and finger visibility at a distance through increased contrast, brightness, fluorescence, and pattern recognition. Knowing where your hands are is the first step in avoiding impacts and associated injuries.

Patented IVE™ Fingertip Design

Our unique hazard stripe finger tips are designed to make fingers instantly recognizable, allowing for faster reaction times in avoiding potential hand impact hazards.

Patented IVE™ Back of Hand

Our unique but familiar pattern is easily recognizable at a distance, even when dirty or in low light environments, improving overall hand awareness and safety.

TruSpeed
by SocIIracing.com

Driven to Perform

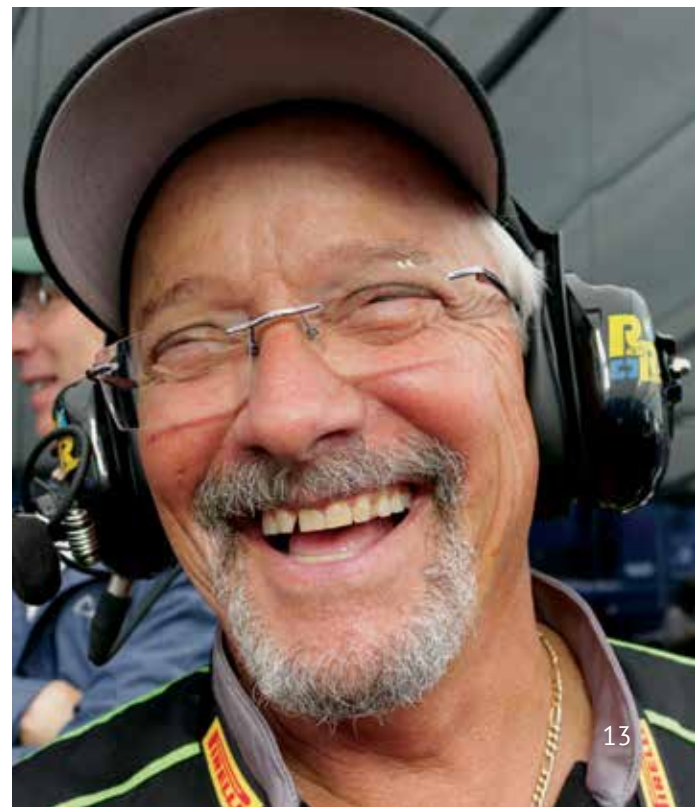

It's race week and a typical day begins around 4:00 AM with a cup of java, the smell of fuel and golden sunrise over an asphalt race track. This is where Tyler Tadevic, the owner of Truspeed, and his team begin their day. They're hoping for good traction and better track times.

The team gathers in the brisk morning for a brief overview, of things to come, and some quick words of encouragement from one another. This is the culmination of several weeks if not months before, when the planning process began at Truspeed's shop in Thermal, California. Although Tyler has been doing this for years, there are new crew members who are learning the nuances of working on a Truspeed team.

Truspeed has been a part of the SOCII racing family for over 25 years, and in that time have won the Pirelli World Challenge. So, they know what it takes to win, because racing is their passion. They partnered with Porsche in 2009, and have been taking drivers and crew members to new levels ever since.

Performance recognizes performance; this is how Ironclad and Truspeed's partnership came into being. It began as a friendship between Ironclad founder Ed Jaeger, his brother, Eric Jaeger, Head of R&D and General Manager, and Tyler Tadevic, owner of Truspeed. Truspeed and Ironclad, whom both have roots in Southern California, naturally gravitated toward each other, as they both valued safety, innovation and high performance. It's a friendship that's endured through the years, and provides a real-world authenticity to the gloves we make.

The race-track is quiet at 4:00 am in the morning, but Tyler and his Truspeed speed have been buzzing in preparation well in advance. The checkered flags await.

Estimated Thermal Performance*

Heavy Duty (HW6X)

| | | | |
|--------------------------------|----------------|----------------|----------------|
| Thermal Protection Time (secs) | 40sec | 33sec | 29sec |
| Object's Surface Temp. | 400°F 204°C | 500°F 260°C | 600°F 315°C |

Reinforced (HW4)

| | | | |
|---------------|----------------|----------------|--------------------------------|
| 31sec | 23sec | 11sec | Thermal Protection Time (secs) |
| 200°F 93°C | 300°F 149°C | 450°F 232°C | Object's Surface Temp. |

* Heat resistance estimates are approximate and intended only as a guide. Your actual experience will vary depending upon factors that include the weight and material composition of the object being held, the pressure being applied to the hot object by the gloved hand, the starting temperature of the glove when it is placed on the hot object, the portions of the glove in contact with the hot surface, and your individual sensitivity to heat. The foregoing estimates assume the user is holding a 3lb. metal object with only palm and palm-side of the fingers in contact with the hot surface, and that the glove temperature is 72°F before coming into contact with the hot surface.

Passion Runs Deep

Within seconds of walking into his workshop, you know you are somewhere special; You're in a place where hours pass in seconds. It's a place where ideas are brought to life. It's where master fabricator and artisan Rene Pacheco, owner of Blunt Steel makes his home.

We met Rene while searching for a Metal Shop to build us an 8-foot-tall mechanical sculpture, aptly named Handzilla. When our initial search with traditional fabrications companies failed because they wouldn't take on an "art" job, we changed it up and sought out an artist who specialized in metal fab. One look at his unique, SoCal infused style and we knew Rene was the guy for us.

Rene is a humble guy, so upon meeting him you'd never know he's the "Go to" guy that some of the biggest names in action sports and worldwide companies rely on for their fabrication needs. He's built skateboard obstacles, railings, steel company signs, and trophies for major sporting events.

Rene's commitment to building these high quality and unique pieces creates enduring products that bring pride and excitement to his customers and friends. These are values that Ironclad appreciates and mirrors.

So when you talk to Rene, or walk past the palm tree lined skate park behind his shop in Southern California, you'll find it hard to not feel inspired by your inner artisan. Be it in metalworking or any medium, Rene truly is Ironclad.

Thank You

Whether you got your first pair of Ironclad gloves from your job or you took a leap of faith to try us out, we thank you for being a part of the Ironclad family.

We hope you enjoy your new gloves and love to see how you put them to use. Be sure to tag your photos with **#iamironclad** to share your projects with the world.
